

CORPORATE PROFILE

Your Trusted Geotechnical
Solution Brand

WHO ARE WE?

Conseal Sdn Bhd was established in 1982 as a geotechnical engineering specialist, committed to delivering reliable and high-quality piling and foundation solutions to support Malaysia's growing property development and infrastructure sectors. Our expertise includes earth retaining systems, earthworks, and basement construction, laying the foundation for our long-standing reputation in the industry.

To date, Conseal Sdn Bhd has successfully delivered over 800 projects for more than 250 clients, both local and international. We are proud to have collaborated with many of Malaysia's leading construction and development firms, including Mitrajaya Holdings Berhad, China State Construction Engineering Corporation Ltd, Sunsuria Berhad, Chin Hin Group, HG Power Transmission, Econpile, Sunway Construction, YTL, WCT Holdings and others.

Our expanding portfolio covers key national infrastructure projects such as the construction of bridges, elevated highways, and electrified double-tracking rail systems, including LRT, BRT, KTM, MRT, and more.

Guided by a strong commitment to technical excellence, safety, and innovation, our team continues to uphold the highest standards across every project. Conseal Sdn Bhd remains dedicated to engineering progress, building with integrity, and delivering solutions that shape Malaysia's future.

COMPANY VISION & MISSION

CHAIRMAN

MR. ANTHONY SOW

WHAT OUR VISION AND MISSION MEAN TO US

Our vision is to be a trusted geotechnical engineering brand in Malaysia, delivering safe, reliable, and innovative solutions. In a field where precision and safety are essential, we aim to be a dependable partner—supporting infrastructure, protecting terrain, and laying strong foundations for future developments. We take pride in building relationships as solid as the ground we work on, guided by professionalism and integrity.

Our mission is to lead innovation and advance Malaysia's standards in foundation and geotechnical engineering. By embracing technology, enhancing expertise, and preserving proven practices, we deliver strong, safe, and efficient foundations that support structures, protect lives, and contribute to the nation's sustainable growth. Every project reflects our commitment to quality, resilience, and a better built environment for future generations.

COMPANY MILESTONES TIMELINE

1982 Company Foundation

Conseal was established with a vision to provide reliable and durable piling and foundation solutions.

1994 Petronas Twin Towers Foundation Completion

Successfully participated in the foundation works for the Petronas Twin Towers, contributing to the stability of one of Malaysia's most iconic landmarks.

2003 Nationwide Expansion & Market Leadership

Strengthened market presence by undertaking larger-scale projects across Malaysia, reinforcing its reputation as a leading micropile foundation specialist.

2003

1990 Establishing Expertise & Industry Expansion

Expanded operations and reinforced expertise in piling, foundation engineering, and geotechnical solutions, setting the stage for major infrastructure contributions.

1998 Infrastructure & Transportation Breakthrough

Made significant contributions to transportation infrastructure projects, particularly in railway and highway developments, further establishing Conseal's industry expertise.

2010 Technological Innovation & Industry Adaptation

Upgraded piling machinery to enhance efficiency and precision in micropile works. Achieved key industry certifications to further reinforce safety and engineering expertise.

2015 - 2021 Major Transportation Projects - MRT, LRT & KTM

Played a key role in foundation works for MRT and LRT developments, enhancing Malaysia's urban connectivity, infrastructure, and growth.

PROJECT ACROSS MALAYSIA

CONSEAL SDN BHD BUILDING MALAYSIA, STATE BY STATE

At Conseal Sdn Bhd, our footprint extends across all 14 states of Malaysia, with a particularly strong presence throughout Peninsular (West) Malaysia. From north to south, east to west, our projects reflect our commitment to delivering quality and excellence in every corner of the country.

Headquartered in Kuala Lumpur, we work closely with a wide range of clients, including government agencies and private developers, to deliver core infrastructure and construction projects across various sectors.

OVERVIEW OF OUR WORK ACROSS MALAYSIA

With decades of hands-on experience and a dedicated team, Conseal Sdn Bhd has established itself as a trusted name in delivering reliable, safe, and lasting solutions across Malaysia. Our expertise spans a wide range of core sectors, including highways, bridges, and public infrastructure, slope protection and geotechnical works, all types of piling and foundation works, as well as commercial and residential developments. We are also actively involved in the construction of schools, public buildings, and various government facilities, supporting national growth through quality and precision in every project.

OUR GEOTECHNICAL EXPERTISE

OUR CORE SERVICES

At Conseal, we specialize in delivering comprehensive geotechnical and foundation solutions. Our core expertise ensures the stability and longevity of every structure we support. Complementing this, our integrated Design & Build approach and Value Engineering services enable us to provide cost-effective, efficient, and innovative solutions tailored to each project's unique requirements.

1. DESIGN & BUILD

Our Design & Build methodology streamlines the construction process by uniting design and construction phases under a single contract. This approach fosters collaboration, reduces project timelines, and ensures cost-effective solutions without compromising quality. By integrating design and construction teams, we can swiftly address challenges and adapt to project-specific requirements, delivering efficient and cohesive outcomes.

2. VALUE ENGINEERING

Value Engineering is a core component of our project delivery strategy. We systematically analyze project functions to identify opportunities for cost savings and performance enhancements. Our team evaluates alternative materials, construction methods, and design modifications to optimize value without sacrificing functionality or quality. This proactive approach ensures that our clients receive the most efficient and economical solutions tailored to their specific needs.

3. GEOTECHNICAL & PILING SERVICES

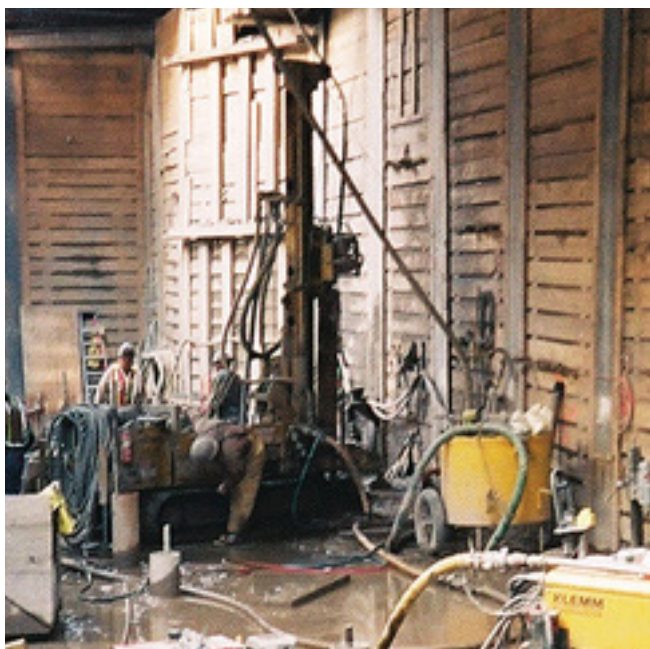

Our geotechnical engineering services form the foundation of our operations. We conduct thorough site investigations to assess soil and rock properties, enabling us to design and implement foundation systems that are safe, efficient, and tailored to site-specific conditions. Our piling expertise encompasses a range of techniques, including as below:

MICROPILE

is a high-performance, high-capacity drilled deep foundation elements typically between 150mm to 400mm in diameter that can extend to depths of 60 meters and achieve working loads of over 200 tons. Micropile comprises high-strength steel casing, rebar and grout.

It is a small diameter, typically ranged around 400mm, drilled and grouted non-displacement pile which is heavily reinforced and carries most of its loading on the high capacity steel reinforcement.

UNDERPINNING

Underpinning is the process of strengthening the foundation of an existing building or other structure. Underpinning may be necessary for a variety of reasons: the original foundation isn't strong or stable enough, the usage of the structure has changed; or the available working ceiling height is limited.

SOIL NAILING

Soil nail walls are generally constructed from the top down. Typically, soil is excavated in 1 to 2 meter deep stages. After each excavation stage, near-horizontal holes are drilled into the exposed face at approximately 1 to 2 meter centers. Tension-resisting steel bars are inserted into the holes and grouted in place.

GUNITING

Guniting is a highly effective method for repairing damaged concrete structures and providing an impervious protective layer. It involves spraying a mixture of cement and sand, typically in a 1:3 ratio, onto surfaces at high velocity. Beyond structural repairs, guniting is also widely used for slope stabilization and protection, especially in areas where traditional vegetation cannot provide adequate erosion control, such as steep terrains.

GROUND ANCHOR

Ground anchor consist of cables or rods connected to a bearing plate are often used for the stabilization of steep slopes or slopes consisting of softer soils, as well as the enhancement of embankment or foundation soil capacity, or to prevent excessive erosion and landslides, used to hold, restrain and support buildings, engineered slopes and other structures, either permanently or temporarily.

GROUTING

The process of grouting consists of filling pores or cavities in soil or rock with a liquid form material to decrease the permeability and improve the shear strength by increasing the cohesion when it is set/harden. Cement base grout mixes are commonly used for gravelly layers or fissure rock treatment.

BORED PILE

A bored pile, also known as a drilled shaft, is a cast-in-place reinforced concrete foundation element constructed by drilling a hole into the ground and filling it with concrete. This method is ideal for supporting heavy vertical loads in structures such as bridges, high-rise buildings, and industrial complexes. Bored piles are particularly advantageous in urban areas where minimizing noise and vibration is essential.

RC PILE

Reinforced Concrete (RC) piles are deep foundation elements constructed from high-strength concrete and steel reinforcement. They are designed to transfer structural loads to deeper, more stable soil layers, making them ideal for supporting heavy structures in areas with weak or compressible soils. RC piles offer high load-bearing capacity and durability, ensuring long-term performance in various construction projects.

SOLDIER PILES

Soldier Piles are vertical H-shaped steel beams installed at regular intervals to support excavations. Horizontal lagging, typically timber or concrete, is placed between the piles to retain soil. This system is ideal for temporary or permanent earth retention in urban construction, offering flexibility and efficiency in various ground conditions.

PILE LOAD TEST BY GROUND ANCHORS

The load which may be safely applied to a pile after taking into account its ultimate bearing capacity, negative friction, pile spacing, overall bearing capacity of the ground below and allowable settlement. This pile which is designed to resist an axial force such as would cause it to penetrate further into the ground.

SPUN PILE

Spun piles are high-strength, prestressed concrete piles with a hollow circular section, manufactured through centrifugal compaction. Utilizing M80-grade concrete, they offer uniform strength, durability, and corrosion resistance. Easily spliced to required lengths, these piles can be driven using conventional hammers, making them ideal for various foundation applications.

SHEET PILE

Sheet pile walls are interlocking steel sheets driven into the ground to retain soil or water. Commonly used for excavations, cofferdams, and seawalls, they are installed using vibratory hammers; impact hammers or hydraulic pressing are alternatives when soil conditions or site constraints require.

EARTH WORKS

Earthwork is involved in the construction of most buildings and would involve the removal of overburden to reach structurally capable earth or soil, excavation for basements and other underground structures, and to make structural fills to support floors. Various types of earthworks have been used for centuries for building structures, fortifications, roads and canals.

WE HAVE ACCOMPLISHED OVER 800 PROJECTS ACROSS MALAYSIA

Conseal Sdn Bhd has proudly completed over 800 projects nationwide, serving more than 250 clients, including major players in property development, construction, and infrastructure. Our portfolio spans from the foundations of the iconic Petronas Twin Towers to housing developments, shopping malls, and large-scale infrastructure works.

We are committed to continuously improving and upholding the highest standards in quality, environmental care, safety, and health. These founding values drive us forward. Through dedicated teamwork and a strong focus on excellence, we strive to achieve strategic goals and continue contributing to Malaysia's growth — one solid foundation at a time.

OUR TEAMWORK STRUCTURE: MOVING TOGETHER TOWARD ONE VISION

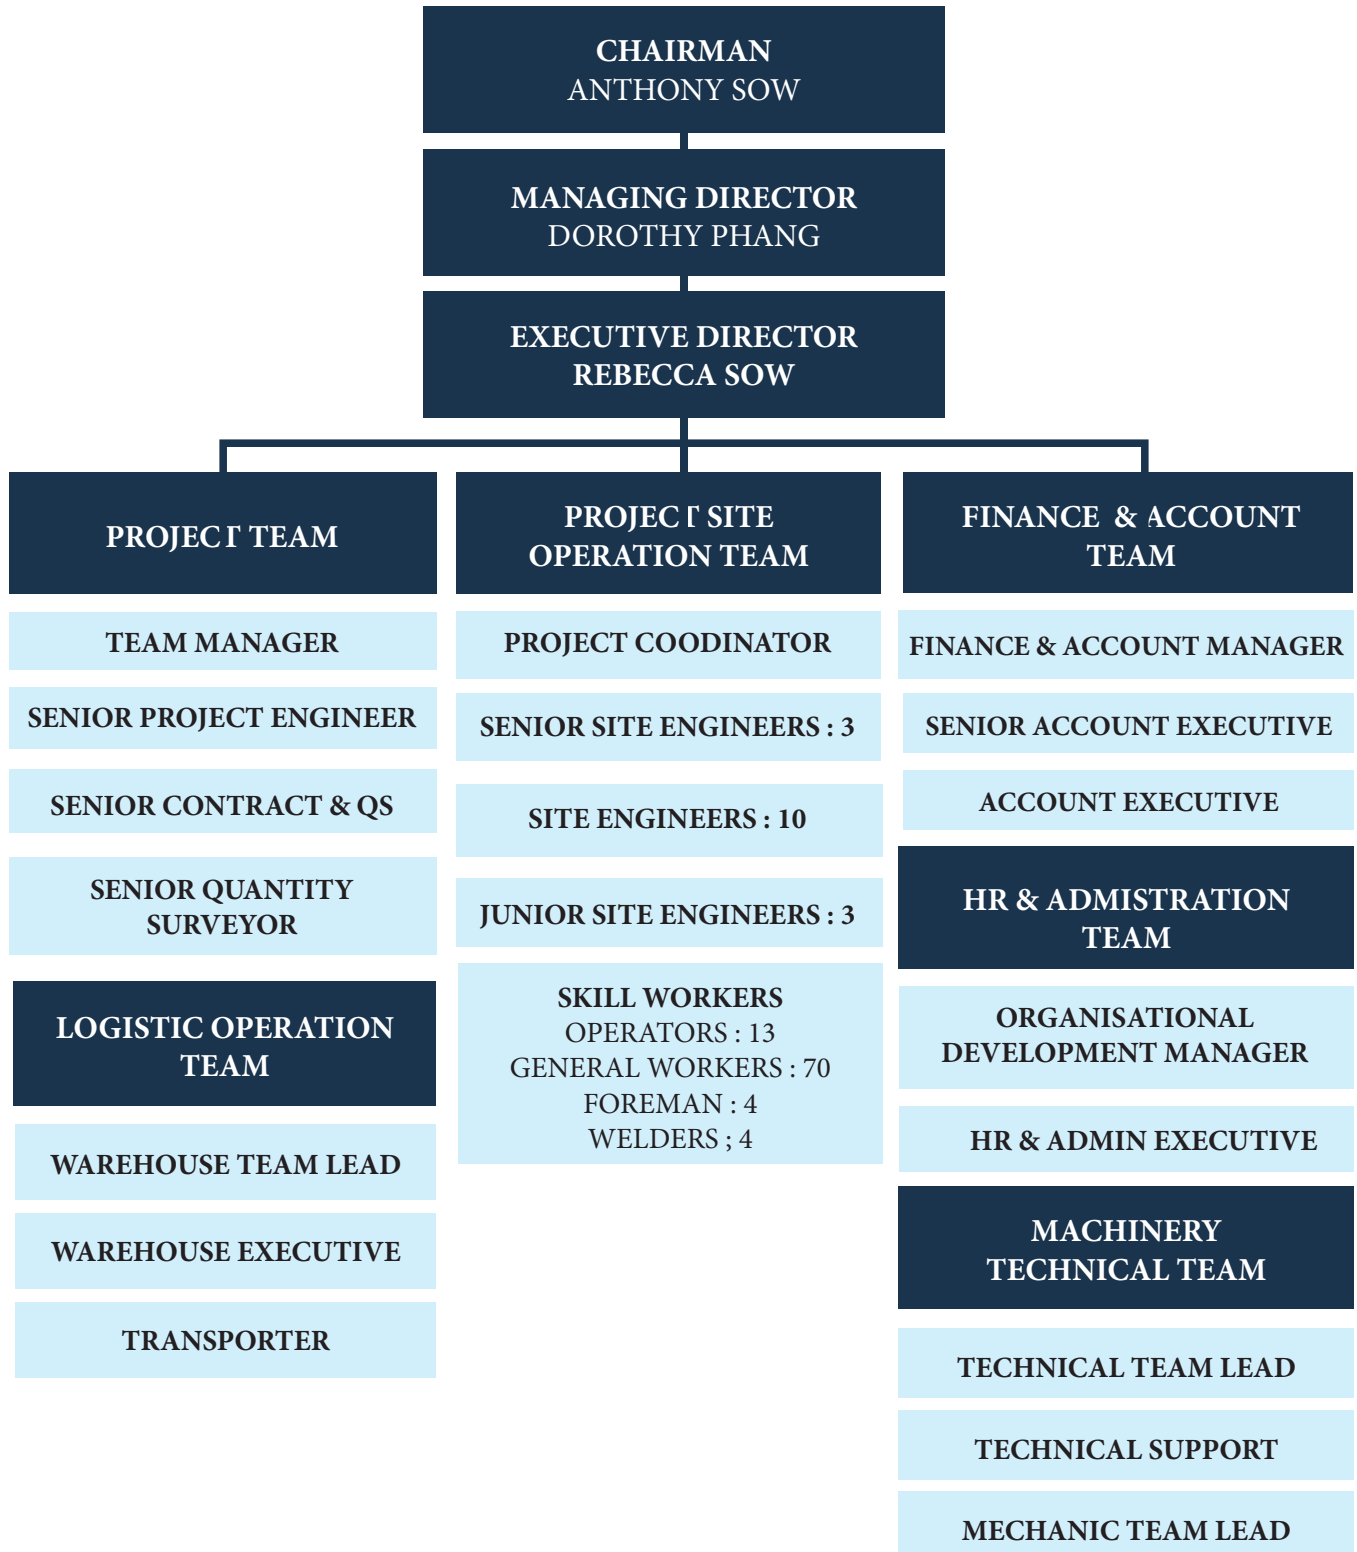

At Conseal Sdn Bhd, our organisation chart reflects more than roles and responsibilities—it represents the spirit of teamwork that drives everything we do. This structure is built on collaboration, trust, and shared accountability across all departments.

Every individual, from management to frontline teams, plays a key role in helping us operate with efficiency, safety, and quality. Our departments are not isolated silos—they are interconnected units working in sync to deliver results.

Together, we are aligned in purpose—working toward the same mission and vision: to build with strength, grow with integrity, and deliver lasting impact across every project. It is this unified direction that enables Conseal to stay agile, focused, and ready to meet the demands of tomorrow.
